For a wide range of coffee machines and other genuine ILVE accessories at the click of a button
shop.ilve.com.au
As a part of our continued customer service offering, you can now register your ILVE products online at https://support.eurolinx.com.au/#/form/warrantyregistration.

Just follow our simple online registration process.

Please ensure that you always keep your proof of purchase in order for your warranty to remain valid should you ever need to use it.

As always, you can contact us on 1300 856 411.
Congratulations,

you are now the proud owner of an ILVE cooking appliance. Thank you for purchasing ILVE and welcome to the exciting world of cooking the ILVE way.

This instruction manual has been specially created to inform you of the full range of features your ILVE appliance has to offer and serves as an introduction to the wonderful benefits of ILVE’s dynamic cooking systems.

We present detailed information on each of the advanced cooking systems built into ILVE appliances. Once you have read this section you will be able to choose the most appropriate settings for your appliance when cooking different types of food.

We ask you to read the instructions in this booklet very carefully as this will allow you to get the best results from using your appliance. KEEP THE DOCUMENTATION OF THIS PRODUCT FOR FUTURE REFERENCE.
SAFETY PRECAUTIONS

Before installing and operating the hotplate, read these instructions completely and carefully.

IMPORTANT To be installed only by an authorised person
- Remove all packaging material and literature from the hotplate before connecting the gas and electrical supplies

INSTALLATION
- Observe all governing codes e.g. AS5601, council ordinances and local authority rules.
- The hotplate must be installed by an authorised person
- The hotplate must be grounded
- Save these instructions for the local inspectors use

TO THE INSTALLER
- After connecting the gas supply, turn on the gas and check for leaks at all joints with soapy water or other approved methods

UNDER NO CIRCUMSTANCES USE A NAKED FLAME IN CHECKING FOR LEAKS. NOT FOR USE IN MARINE CRAFT, CARAVANS OR MOBILE HOME UNLESS EACH BURNERS IS FITTED WITH A FLAME SAFE GUARD

OPERATING INSTRUCTIONS

WARNINGS

Before using the cooker, read the instructions booklet carefully. This contains very important information concerning safety during installation, use and maintenance. The instructions booklet must be kept with care for later consultation.

Do not use or store flammable materials in the appliance storage drawer or near this appliance. Do not spray aerosols in the vicinity of this appliance when it is in operation. Where this appliance is installed in a marine craft or in caravans, it shall not be used as a space heater. Do not modify this appliance. If the hotplate fails to operate correctly, contact Eurolinx Pty ltd or their appointed agent for service. DO NOT ATTEMPT REPAIRS YOURSELF; repairs and servicing shall only be carried out by Authorised Personnel.

This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety. Children should be supervised to ensure that they do not play with the appliance. Never place unsteady or deformed pans on the burners or on the electric hotplates as they could overturn accidentally. When placing pans on the hob, always ensure that the handles are facing inward so that there is no risk of knocking against them. When the cooker is not in use, ensure that all knobs are exactly in position “0 / 0” Never leave the hotplate switched on without a pan on it, otherwise it will reach a very high temperature quickly and the cooker or furniture in the vicinity could be damaged.
LIGHTING BURNERS – simply press the knob in, turn anti-clockwise to maximum, the electronic igniter will spark and ignite the burner. Check that the gas has been lit; if the burner fails to ignite repeat the above process.

For models with Flame Failure follow the above procedure but keep the knob fully depressed for up to 10 seconds after ignition to allow the safety to lock in. Check that the gas has been lit; if the burner fails to ignite repeat the above process. If the burner still fails to ignite, a match or lighting device can be used, but care must be taken. Keep igniters dry. If the problem persists, contact Eurolinx Pty Ltd or their appointed agent for service.

DO NOT TOUCH HOT SURFACES, ALLOW HOB TO COOL BEFORE WIPING SPILLAGE.

PRACTICAL HINTS FOR USE

WARNING
Do not use pots which exceed the width of the trivet (the trivet is the frame with fingers that the pot sits on). If pot size exceeds the edge of the trivet, flames could cause damage to work surfaces either side of the burner. Do not use pots which are too small for the burner size, they become unstable on the trivet.

Always use a vessel for cooking that is appropriate in size for the size of burner. Never use pots that are too small or too large. For wok cooking it is recommended that a domestic size wok, no larger than 400mm in diameter be used.

Always use the small star trivet for pots with a base smaller than 100mm.
Use a strong flame to bring liquids to boil, seal meat and generally for all food which must be cooked rapidly i.e. when using a wok.

Use a low flame for sauces or stews.

Do not cook food over too strong a heat. Boiling food fast does not cook any faster but violently stirs up the food causing it to lose flavour.
Control Knob Settings

A = Max  
B = Med  
C = Min

The Fry-Top is composed of a special stainless steel plate (8mm thick), specially designed to have temperatures evenly distributed over the whole surface so that you can utilise the complete cooking surface. The plate also has hygienic advantages.

Another advantage is the high heat accumulation of the plate, with very low heat loss. To use the appliance, light the flame below the plate by means of the corresponding knob (see “Lighting the burners”) and ensure that the flame is burning.

Leave the knob in this position for about 10 minutes at the most and wait for the plate to heat up. Once this period has elapsed, the plate is ready to start cooking.

By adjusting the flame, there is no limit to your culinary imagination. If you turn the knob to minimum, you can do slow cooking or types of cooking in which you want to maintain the organic properties of the foods. Higher temperatures are suitable for cooking meat, fish and vegetables.

The Fry-Top plate is ideal for Japanese Tepanyaki cooking: the special lid needed for this type of Oriental cooking is available as an optional accessory.

Some models are supplied with the spatula shown in above, which is useful for both cooking and for cleaning the plate.

**CLEANING AND CARING FOR THE TEPANYAKI PLATE**

Allow the tepanyaki plate to cool slightly and pour on white vinegar. Allow to sit for five minutes then scrape the plate with a flat spatula. For heavy build up a scourer may be required.

ELECTRIC BBQ (LAVA GRILL)

The Lava Stone BBQ allows you to BBQ meats and fish without the use of oils. The lava stones placed under the electric element enables a constant temperature (250°C) and the absorption of fats without smell and vapor. The grid, tray and lava stones are easily removed for cleaning. Before turning on the appliance, check that all parts are well installed. To turn on the BBQ rotate the knob to the desired setting between “1” and “12”; the indicator light will be illuminated, indicating that the appliance is working. When the knob is turned to the “0” position the appliance is turned OFF and the indicator light will go out. Important: To grill, we recommend pre-heating the grill element and lava stones for approximately 10 minutes on position “12”, this allows the lava stones to reach the required temperature to vapourise the fats and liquids from the meat to enhance the flavour of the produce being cooked.

CARING AND CLEANING FOR YOUR LAVA STONE BBQ

Before cleaning, disconnect the appliance from the mains. Cleaning must be carried out when the appliance is cold. Remove all the removable parts. Remove the grid, lift the heating element and take away the hob bed with lava stones. Stainless steel parts must be cleaned with water and detergent, then dry with a soft cloth carefully. Under no circumstances use corrosive or abrasive detergent, this could damage the appliance. Stainless steel, brass or copper parts must be treated by using the proper products, thus keeping the brightness for a long time.

Control Panel and aluminium parts must be cleaned by means of degreasing detergent.

To clean the Lava Stones, you can wash them gently in hot soapy water and then allow them to dry well before re-use. Alternatively, you can put them into a stocking or perforated sleeve/cloth, place them on the top basket of your dishwasher and use a hot wash cycle with NO powder.
INSTRUCTIONS FOR USE OF THE ELECTRIC PLATE

The vitreous ceramic electric plate (5) is controlled by a knob (as above energy regulator). A pilot light comes on as soon as the heating element is activated. The control knob is graded from 0 to 12. Position 0 indicates that the corresponding cooking area is switched off. Position 1 indicates that the corresponding cooking area is at the minimum power, while position 12 indicates that the cooking area is at maximum power.

The energy regulator controls the cooking area with two circuits (5). When the knob is turned clockwise from position (off) to the desired position (1-12), the primary part of the cooking area is switched on. To switch on the secondary part, turn the knob to position 12 and then turn it past position 12 as far as it will go in a clockwise direction. At this point the secondary circuit switches on and it is possible to vary the power from 1 to 12 (1 = minimum, 12 = maximum).

RESIDUAL HEAT WARNING LIGHTS

There is a residual heat warning light (Q) on vitreous ceramic hob. Its purpose is to increase the safety of the appliance because when it is lit it indicates that the cooking area is still very hot. The residual heat warning light stays lit even after the cooking area has been switched off to warn you that it is still hot.

Important: The ceramic hob cooking surface remains hot for a long time after use. Do not touch the hob with your hands or let children near it. The residual heat indicator will remain lit until the hob has cooled down. If any cracks appear in the ceramic hot, disconnect the appliance immediately from the mains and call an authorized technical service centre.

ELECTRIC HOTPLATE

For efficient use and low energy consumption, it is advised to use pans specifically designed for electric cooking on ceramic hobs. The bottom of the pan must be thick and flat. Its diameter must be as similar as possible to that of the cooking ring. The surface of the hob and the bottom of the pan must be kept clean.

A – Do not leave the hotplate switched on without a pan
B – Do not wet or overheat the plates
C – Avoid sudden changes of temperature on the ceramic hob. For example, do not pour cold water onto the hot hob.

D – Ensure that the pan covers the whole cooking area.
E – The bottom of the pan must be flat and dry so as to use less energy and keep your ceramic hob in good condition.
F – Do not leave the pan handles sticking out as they could be knocked over accidentally.
G – Do not forget that the cooking area remains hot for quite a long time even after it has been switched off. Make intelligent use of this characteristic by switching off the cooking area a few minutes before completing cooking. The residual heat that has been accumulated in the ceramic will thus enable you to complete cooking without using more electric power.
H – It is preferable not to cook on the ceramic hob with pans that have been used on gas burners. The flames may deformed the bottom of the pans. Do not use aluminium pans on your ceramic cook top as this metal is very soft and can damage and/or permanently stain your cook top.

Cooking Table - (The following table is a guide only to settings for a variety of foods.)

CLEANING THE CERAMIC HOB

The flat surface of the ceramic hob makes it considerably easier to clean than traditional hobs. Clean the hob in the same way as any glass surface in your home. Never use abrasive products. Routine cleaning must be carried out when the hob is cold. Caution: take care not to drop substances containing sugar on the hob during operation. If this should happen, immediately turn off the respective heating element and clean with warm soapy water before the glass cools. When performing this special cleaning, take particular care not to burn yourself.

We recommend cleaning the cooking top once it has cooled down. The stainless steel and painted parts must be cleaned with lukewarm water and anti-corrosive liquid detergents. Dry the parts with a soft cloth.

Never use steel wools or abrasive detergents. To keep the surface clean, we recommend Hillmark Cerapol or Ceraseal alternatively, detergents or similar products. The instrument panel and all the aluminium parts must be cleaned only with alcohol or de greasing products. Never use lemon on MATT / GRAPHITE.

BUILT-IN INSTALLATION

To avoid liquid infiltrations under the working tops, it is necessary to apply a gasket which is supplied with the top. The fixing to the furniture is carried out with clamps assembled on the appliance as per Figure 2. For Freestanding cooking hob models (P665, P965, P1265) must be installed with the top of the hob level with the bench and must support a minimum weight of 100 kg.

It is recommended that the adjacent kitchen surfaces should be capable of withstanding temperatures of 100°C.
These technical instructions have been prepared for use by Authorised persons. This unit must only be installed by an Authorised person. The installation must be carried out by qualified personnel in accordance with the relevant requirements of the Gas Safety Regulations, the local Building Regulations.

Gas connection
Gas-powered devices for home use, which are not connected to a conduit for the evacuation of combustion products, must not cause a concentration of carbon monoxide that could pose a health risk to the persons exposed in relation to the time of exposure. We recommend checking that the appliance is properly set up for the type of gas distributed. The connection to the gas pipes must be made in a workman-like manner, in compliance with current standards that prescribe the installation of a safety tap at the end of the pipe. The Gas Connection is male ½” BSP and is situated at the right hand rear of the appliance.

During installation ensure that the flexible connection be located so as to prevent excessive operating temperatures affecting the hose. Under no circumstance is the temperature of the flexible connection to exceed its approved rating. The flexible connection should also be checked visually for any abrasion, defect or kinking and replaced or repositioned to prevent abrasion, kinking and permanent deformation if necessary. Always ensure that a restraining chain, if fitted, be correctly fitted so that strain is not placed on the household plumbing.

It is recommended that an isolating valve and union be fitted, to enable simple disconnection for servicing. These are to be in an accessible location.

Natural Gas
The appliance is factory set for Natural gas and is supplied with a 1kPa regulator that must be fitted to the gas supply to the appliance.

ULPG Gas
The ULPG gas pressure regulator must be set to provide a supply pressure of 2.75kPa conforming to standards regulations in force should be fitted. Fit the test point assembly supplied with the appliance to the gas connection when installing for use with ULPG Gas.

It is possible to connect the gas in the following ways:
This appliance is suitable for use with either a flexible connection or rigid copper connection. If installing the appliance with a flexible connection the flexible connection must be Australia Gas Association approved to class B of AS/NZS1869 as a minimum. Using a Plumberzy flexible hose, AGA approval number 6196, 10mm ID, class D and between 1-1.2m long in accordance with AG601 for a “high level connection”.

Ensure when fitting the elbow supplied with the appliance that the sealing washer is used to prevent gas leaks.

Warning: on the cooking top, it is forbidden to carry out the gas connection by means of the rubber flexible pipe fixed onto the rubber hose, as it is not possible to inspect the pipe.

Warning: Once the installation has been completed check if there is any gas leakage by using soapy water or other suitable leak detection fluids.

DO NOT USE FLAMES TO CHECK ANY GAS LEAKAGES.

Installation - Electrical Connection

BEFORE CONNECTING THE PLUG INTO THE POWER SOCKET, FOLLOW THESE INSTRUCTIONS

The electrical supply for the upright cooker must be a 240 volt 50 Hz. The fuse and electrical wiring of the home / premises must support the load of the appliance.

The hotplate must be earthed. Connect the hotplate to a properly earthed and rated power socket, as appropriate. The flexible cord of the appliance must not be subject to direct heat and must be positioned after installation of the hotplate so that its temperature does not exceed 75°C.

IMPORTANT if a power socket needs to be installed or relocated, the work must be done by a licensed electrician.
The cooking hob is supplied as a natural gas unit and should not require any adjustment of the aeration. If the appliance is ordered and specified as a ULPG gas then it will be converted by Eurolinx prior to dispatch and should not require any adjustment to the aeration. Follow the steps below to convert to LPG and to adjust the aeration of the burners. Remove the pan supports, caps and burners from the hob. Remove the screws from under each burner that are securing the hob to the base and lift top up to gain access to the burner venturie.

Note: Some models that do not have a one piece hob will have securing around the outside edge of the spillage bowl that will also need to be removed to gain access to the underside of the cooking hob.

Remove screw “F” and remove air damper “R” Replace the Natural gas injector that is located at entry point of the venturie “U” with the ULPG injector. Use the chart below to identify the correct injector for each type of burner. Replace the air damper “R” and refit screw “F” leave lose to allow adjustment of aeration.

</tr>
</tbody>
</table>

AIR ADJUSTMENT
The air adjustment is to be carried out with the flame at the maximum, with a screwdriver loosen screw “F” and move the cylindrical sleeve “R” towards the injector to decrease the air, move it away from the injector to increase the air. Once the correct aeration is achieved tighten screw “F” to fix the position.

Examples:

A. Flame with excess of air: it is small, tight and separated. Move forward the cylindrical sleeve R placed in front of the injector.
B. Flame with lack of air; it is floppy with yellow streaks. Move backward the cylindrical sleeve R placed in front of the injector.
C. Normal flame: its colour is light blue

Low Flame Adjustment of Burners

When installing the appliance it is recommended to check that the burner minimum speed (Low Flame Setting) has been correctly adjusted. If it is necessary to change the type of gas, adjustment of the low flame setting must be completed by the installer. To adjust the minimum setting for the burners the following steps must be complete.

Recommended Bypass (Low Flame Settings) Turns from fully in position

Minimum flow of cooking hob taps (Figure 1)

- Switch on the burner and turn the control knob towards the minimum flow position;
- Remove the knob;
- Using a screwdriver, adjust the internal screw until the correct low flame is obtained, the screw is located just to the right of the shaft see figure 1
- Refit the knob.

Minimum flow of non-valved cooking hob taps (Figure 2)

- Switch on the burner and turn the control knob towards the minimum flow position;
- Remove the knob;
- Insert a small screwdriver into the shaft of the gas valve and adjust the internal screw until the correct low flame is obtained; see figure 2
- Refit the knob.
- Unscrew the adjustment screw to increase the flow, or tighten it to reduce the flow.
- The adjustment is correct when the low flame measures approximately 3 or 4 mm.
- For ULPG the adjustment screw should be tightened all the way.
- When changing quickly from maximum to minimum flow and vice versa make sure that the flame does not go out.

ENSURE THE MINIMUM FLAME WILL NOT BE EXTINGUISHED BY AIR DRAUGHTS

Check that the igniter for each burner successfully ignites the gas and that the burner remains alight. If an igniter fails to work or a burner fails to remain alight, first remove the plug from the electrical power outlet, and then check that all electrical connections are in place. If the hotplate fails to operate correctly, contact Eurolinx Pty Ltd or their appointed agent for service. When satisfied that the hotplate is operating correctly, instruct the customer in its safe operation. Ensure the customer understands fully by having them operate the hotplate in all its functions.
Pressure Adjustment
First turn the gas off to the appliance. Remove the sealing screw from the regulator’s test point at the rear of the appliance and place the hose of the Manometer onto it. Turn the gas on to the appliance and light the Wok Burner and Small Burner at maximum setting. Check the pressure and adjust at the regulator if necessary to the setting in the table on the last page or the Data plate. For ULPG Gas adjust at the regulator on the cylinder – Turn regulator adjusting screw clockwise increases pressure whilst anti-clockwise decreases pressure. Refit the test point sealing screw when finished.

Electrical Equipment and Components
Electrical componentry is primarily located below the hob surface. Removal of the hob is straightforward by removing the control knobs, trivets, the burner caps and burner head assemblies and skirts. Using a flat bladed screwdriver remove the five screws, one in each corner of the hotplates left and right spillage bowls and one centrally located at the rear of the centre spillage bowl. Than lift the hob upwards.
Replacement is a reversal of the above procedure. Care must be taken to ensure that no damage occurs to the spark ignition leads or the igniters. The electronic ignition pack is easily accessible for service or replacement below the hob centrally at the rear.

ALWAYS ENSURE THAT THE POWER SUPPLY IS DISCONNECTED BEFORE SERVICING APPLIANCE

Gas Controls And Gas Manifold
Removal of the gas manifold is accomplished by removing the control knobs, the trivets, the burner caps and burner head assemblies and skirts. Using a flat bladed screwdriver remove the five screws, one in each corner of the hotplates left and right spillage bowls and one centrally located at the rear of the centre spillage bowl. Care must be taken to ensure that no damage occurs to the spark ignition leads, igniters or thermocouples (if fitted). Disconnect all ancillary gas piping. Remove the two securing screws from the positioning brackets at the front and also the securing bracket near the gas inlet point to the burner compartment. The gas manifold may then be extracted. Replacement is a reversal of the above procedure.

ALWAYS ENSURE THAT THE GAS CONNECTION IS DISCONNECTED BEFORE SERVICING APPLIANCE

Conversion
If the appliance is to be used with another gas type, either ULPG Gas or Natural Gas, it must be converted by an Authorised Person. Contact Eurolinx Pty Ltd or their unauthorized agent for details. For Natural and ULPG Gas Injector Sizes and MJ/H refer to tables on pages 21 & 22. The table on page 22 shows the appropriate injector sizes for either ULPG Gas or Natural Gas.

NOTE
After conversion check the GAS PRESSURE and IGNITER OPERATION for the burners. If the hotplate cooker cannot be adjusted to perform correctly, or if there is excessive flame discoloration, yellow tipping or excessive noise contact ILVE or their authorised agent for advice. It is also recommended that this appliance be serviced at 12 months minimum intervals or sooner as required. Please also ensure that the duplicate data plate supplied be attached to the appliance or in an accessible place such as a cupboard for future reference.

IMPORTANT: Verify periodically the gas connection pipe and replace it as soon as any irregularity is present.

IMPORTANT: Correct positioning of the brass flame distributor is very important. For this purpose, ensure that the flame distributor tooth coincides with the notch on the aluminum base. To keep the flame distributor covers new, you are advised to remove them before lighting the flame.
CLEANING, CARE & MAINTENANCE

Cooktops
Clean the stainless steel cooktop surface after each use with a clean cloth and normal detergent. Make sure the detergent does not contain chloride or any chloride compound. For persistent stains use warm vinegar or a non-abrasive cleaner. To make cleaning easier always wipe spills when they occur; do not leave them to dry as this makes cleaning harder.

Trivets
Trivets should only be cleaned once they have cooled, to stop crazing from occurring. To clean trivets, wash in sink with warm soapy water then dry immediately using a clean dry cloth. Do not use anything too abrasive such as a chrome detergent as this may cause damage. The alkalinity of dishwashing detergents could damage the trivets. If you choose to wash the trivets in the dishwasher we recommend you use a hot rinse mode with no detergent. Enamede trivets may over a period of time discolor, this is due to exposure to a naked flame which may burn the enamel edge off the tips of trivets. This will not affect the performance of the cooktop. To remove surface staining use any cooking oil and a fine brush or scourer, lightly oiling trivets will also help in keeping their new appearance.

Burner caps
The burner caps sit on the brass burners. To clean, remove and wash in warm water. Burner caps should not be put into cold water immediately after use, as crazing will occur, always allow caps to cool before cleaning. ILVE recommend removing the burner caps when cooking as they are only cosmetic.

Brass burners
The brass burners will tarnish to a brown colour with use. To clean simply soak in white vinegar for 20 minutes to remove food splatter.

Aluminium skirts
The aluminium skirt from the base of the burner may be washed in warm soapy water using a gentle scouring pad to remove any burnt on food splatter. A commercial product such as Autosol, which is designed for cleaning aluminium, can be used following makers’ instructions. Do not put skirts in the dishwasher as this will cause the aluminium to discolor. ILVE recommend burner skirt covers to help protect the Aluminium Skirts (available at all ILVE Showrooms or shop.ilve.com.au).

Stainless steel
Stainless steel can be cleaned using a range of commercial products and stainless steel cleaners. Follow makers’ instructions, taking care when cleaning around the graphics. When cleaning, be sure to follow the grain of the stainless steel as much as possible. Never use abrasive products on the stainless steel as it will scratch the stainless steel. Take care not to drop substances containing sugar on the hob, if this does happen clean with warm water immediately.

Oven light replacement
Replacement globes are available from the live service department. When changing over the lamp always switch off the power first. Unscrew the glass cover over the globe by twisting it anti-clockwise. If glass cover is hard to unscrew, heat oven slightly, as this will heat any fat that might be congealed around the glass, and unscrew using a cloth. Remove existing globe and fit new ‘edison screw’ bulb, refit the glass cover and switch on the power.

NOTE: The light may be difficult to remove over time. Try using Multi-Grips being sure NOT to break the bulb and/or glass.

Rangehoods
Rangehood filters need to be washed regularly by using warm soapy water and dried using a soft dry cloth. There are various commercial products available which also may be used. Follow manufacturers’ directions for use. Cleaning filters in the dishwasher: The heavy alkalinity of dish washing detergents could damage filters. If you choose to wash the filters in the dishwasher we recommend you use a hot rinse mode with no detergent.

Recommended cleaning products
Burner Skirts and Brass Burners:
• Autosol metal polish, available at automotive shops
• Autosol shine, available at Car auto retailers

Solid Plates:
• Hillmark solid hotplate protector, available at supermarkets

Ceramic Plates:
• Hillmark Cera-clean, available at electrical stores
• Hillmark CeraPol, available at Supermarkets

Take care not to drop substances containing sugar on the hob, if this does happen clean with warm water immediately

Enamel Interior of Ovens:
• Non-Caustic oven cleaner. Spray the cleaner onto a damp cloth rather than spraying directly into oven to prevent the spray getting onto the catalytic liners, which can cause damage.

Stainless Steel:
• Cut back stainless steel solution for initial use only, available from ILVE Showrooms or shop.ilve.com.au
• 3M Stainless Steel Cleaner and Polisher, available at supermarkets
• Gumption, available at supermarkets
• Watered down Windex (1/3 Windex to 2/3 water) available at supermarkets

IMPORTANT: Always use non-caustic cleaners on Ilve products. The above products are recommendations only. ILVE will not be held responsible for any non ILVE product.

NOTE: ILVE sells a select range of cleaning products through our showrooms and on our NEW online shop.

**Steamed Trout with Dill & Lemon**

**Marinated Seafood Skewers**

**Fettuccine with Chilli & Garlic**

**Australian Breakfast**

---

**TEPANYAKI**

Serves 2

Preparation time: 10 minutes

Cooking time: 10 minutes

Ingredients:
- 2 piece of trimmed steak (the cut of meat is up to you)
- 2 pieces of salmon steaks (or any other fish steak)
- ½ a capsicum
- 4 mushrooms
- ½ a bunch of rosemary leaves
- ½ an onion chopped
- 1 bunch of shallot tails
- 1 garlic clove
- Extra virgin olive oil
- Salt and pepper

1. Cut and trim vegetables place in deep bowl and mix in rosemary leaves garlic and extra virgin olive oil and mix well.
2. Pre heat teppanyaki plate on high for 10 minutes.
3. Brush steak and chicken with extra virgin olive oil and season to taste with salt and pepper then add to the teppanyaki plate.
4. Once the steak and salmon require turning add the vegetables to the teppanyaki plate and work the vegetables until meat has finished cooking then serve.

More recipes are available on the ILVE operating Instructions DVD available for purchase at shop.ilve.com.au
AUSTRALIAN BREAKFAST

Serves 2
Preparation time 10 minutes
Cooking time 10 minutes

Ingredients:
4 eggs
4 sausages
6 rashers or bacon
2 large mushrooms sliced
2 tomatoes halved

1. Heat teppanyaki plate up for 10 minutes then brush plate with extra virgin olive oil.
2. Place sausages on teppanyaki plate and cook for 5 minutes turning as needed.
3. Add bacon, mushroom, tomatoes and cook for a further 5 minutes.
4. Add eggs onto the plate and remove all food from the teppanyaki plate when the eggs have cooked.

ILVE COOKING TIP
To avoid splatter and trap heat, use ILVE’s teppanyaki dome cover accessory.

FETTUCCINE WITH CHILLI & GARLIC

Serves 4
Preparation time 10 minutes
Cooking time 10 minutes

Ingredients:
500g fettuccine
Salt
1 chilli sliced thinly
2 cloves garlic crushed
3 tablespoons olive oil
Grated parmesan

1. Bring large saucepan of salted water to the boil.
2. Cook fettuccine, uncovered, until just tender then drain.
3. Heat oil in a large frying pan, add chilli and garlic, frying gently for 2 minutes.
4. Add drained pasta to chilli and garlic mix, toss gently to combine. Divide pasta among serving bowls and top with grated parmesan.

5. For variations of this dish add seafood, meats, cream or tomato sauces according to your taste.
MARINATED SEAFOOD SKEWERS

Serves 4

Preparation time
20 minutes

Cooking time
5 minutes

Ingredients:
1kg seafood, salmon, green prawns and octopus
½ cup (125ml) olive oil
Juice 1 lemon
2 cloves garlic, crushed
1 tablespoon parsley or dill, chopped
Freshly ground pepper, to taste

Bamboo skewers, soaked in water

1. Cut salmon into cubes, peel prawns and cut tentacles off octopus, leaving on tails.
2. Mix together oil, lemon, parsley or dill and pepper to taste in a bowl, making marinade.
3. Add seafood and marinate for about 15 minutes.
4. Heat teppanyaki plate or grill plate to hot.
5. Place skewers on heated plate and cook for approximately 5 minutes, turning frequently.

ILVE COOKING TIP
Do not overcook seafood, generally once it has lost its opaque appearance the seafood is ready.

STEAMED TROUT WITH DILL & LEMON

Serves 6-8

Preparation time
10 minutes

Cooking time
15 minutes

Ingredients:
1 500g trout, cleaned and scaled
1-2 cups (500mL) fish stock or water
Sprigs of dill
1 lemon, sliced
1 spanish onion, sliced

1. Place trout, dill, lemon slices and spanish onion slices onto a perforated tray into fish kettle.
2. Carefully pour in 1-2 cups of water or stock in fish kettle and lower tray with trout carefully into fish kettle, cover with lid.
3. Steam the fish with a gentle simmer for approximately 10-15 minutes. Test fish after 10 minutes by using a fork to flake the thickest part of the trout. It is ready when it flakes easily.

ILVE COOKING TIP
Check fish with point of knife by lifting the flesh, fish will be ready when the opaque appearance of the flesh is gone.

**BUILT-IN COOKTOPS**

Eurolinx Pty Limited A.B.N. 50 001 473 347 trading as ILVE (“ILVE”)

Office: 48-50 Moore Street, Leichhardt N.S.W 2040
Post: Locked Bag 3000, Annandale, N.S.W 2038
P: 1300 856 411

**WARRANTY REGISTRATION**

Your ongoing satisfaction with your ILVE product is important to us. We ask that you complete the enclosed Warranty Registration Card and return it to us so that we have a record of the ILVE product purchased by you. Alternatively, you can now register your warranty online at http://support.eurolinx.com.au/

**PRIVACY**

ILVE respects your privacy and is committed to handling your personal information in accordance with the National Privacy Principles and the Privacy Act 1988 (Cth). A copy of the ILVE Privacy Policy is available at www.ilve.com.au. ILVE will not disclose any personal information set out in the Warranty Registration Card (“Personal Information”) without your consent unless required by:

1. law;
2. any ILVE related company;
3. any service provider which provides services to ILVE or assist ILVE in providing services (including repair and warranty services) to customers. Our purpose in collecting the Personal Information is to keep a record of the ILVE product purchased by you, in order to provide a better warranty service to you, contact you about your warranty and to assist ILVE in providing services approved by ILVE.

**WARRANTY**

1. Warranty

ILVE warrants that each ILVE product will remain, for a period of twenty four (24) months computed from the date of purchase of the ILVE product, free from defects arising in the manufacture of the ILVE product (“Warranty”). Except for consumer guarantees set out in the Competition and Consumer Act 2010 (Cth) (“Act”), ILVE does not make any further warranties or representations in relation to ILVE products.

2. What is Not Covered by the Warranty.

The Warranty does not apply if an ILVE product is defective by a factor other than a defect arising in the manufacture of the ILVE product, including but not limited to:

(a) damage through misuse (including failure to maintain, service or use with proper care), neglect, accident or ordinary wear and tear (including deterioration of parts and accessories and glass breakage);
(b) use for purpose for which the ILVE product was not sold or designed;
(c) use or installation which is not in accordance with any specified instructions for use or installation;
(d) use or operation after a defect has occurred or been discovered;
(e) damage through freight, transportation or handling in transit (other than when ILVE is responsible);
(f) damage through exposure to chemicals, dusts, residues, excessive voltage, heat, atmospheric conditions or other forces or environmental factors outside the control or ILVE;
(g) repair, modification or tampering by the purchaser or any person other than ILVE, an employee of ILVE or an authorised ILVE service contractor;
(h) use of parts, components or accessories which have not been supplied or specifically approved by ILVE;
(i) damage to surface coatings caused by cleaning or maintenance using products not recommended in the ILVE product handbook provided to the purchaser upon purchase of the ILVE product;
(j) damage to the base of an electric oven due to items having been placed on the base of the oven cavity or placing the base, such as aluminium foil (this impedes the transfer of heat from the element to the oven cavity and can result in irreparable damage); or
(k) damages, dents or other cosmetic imperfections not affecting the performance of the ILVE in respect of an ILVE product purchased as a “factory second” or from display

The Warranty does not extend to ILVE products used in ILVE products.

3. Domestic Use

Each ILVE product is made for domestic use. This Warranty may not extend to ILVE products used for commercial purposes.

4. Time for Claim under the Warranty

You must make any claim under this Warranty within twenty eight (28) days after the occurrence of an event which gives rise to a claim pursuant to the Warranty, by booking a service call on the telephone number below.

### PROBLEM ANSWER

**COOKTOPS**

<table>
<thead>
<tr>
<th>PROBLEM</th>
<th>ANSWER</th>
</tr>
</thead>
</table>
| My burners will not ignite                                             | • Check to see if the brass burners are placed correctly into the aluminium base. This is very important as it will ensure the flame holes line up with the ignition post and spark. It will also ensure correct combustion when alight.  
• Does your ILVE cooktop have flame failure devices fitted? Ensure burners are located correctly as above. When burner is lit, ensure knob is firmly depressed for 5 to 10 seconds.  
• If there is a saucepan (or similar) on the burner, remove it before igniting  
• Check to see that the electric igniter is lined up with the solid part of the burner |
| Does your ILVE cooktop have flame failure devices fitted?              | Ensure burners are located correctly as above. When burner is lit, ensure knob is firmly depressed for 5 to 10 seconds. If new, ensure knobs are firmly fitted, check by pushing knobs down firmly with the palm of your hand. |
| My ignition continually sparks                                         | This may be due to a liquid spill over, which can cause moisture to enter into ignition micro switches under knobs. Spraying liquid type cleaners can also create a problem. If this does occur, the cooktop should be turned off at power point and left to dry out. Removing all knobs and using a hair dryer on the control panel, will assist the drying out process. |
| All the igniters spark at the same time when lighting                  | This is normal and how they are designed to operate. |
| The knob is loose on shaft                                             | Knob retaining spring clip has come out. This does not require a service technician and can be replaced by the customer. Please contact your ILVE state office, who will arrange for a clip to be sent to you. |
| The burner is extinguished when the cupboards or drawers are opened or shut | In this case, the underside of the cooktop needs to be totally sealed off from the surrounding cupboards or drawers. |
| The flame tips are yellow causing the pots to blacken on the underside | The gas type may be incorrect contact your installer and have him check the gas type and the injector size and or the aeration needs adjusting see pages 40-41 |
| The low flame is still too high                                        | The low flame bypass screw needs to be adjusted contact your installer and have him adjust the low flame setting as per the specification on page 41. |
