ILVE's induction cooktops are for people who have been thinking about upgrading their cooktop at home but aren't able to go gas, ILVE's induction systems are the ultimate alternative.

Unlike normal electric cooktops, induction technology produces heat by creating a magnetic field which generates heat directly to the cooking vessel. This means that the heat is instantaneous, temperature control is immediate and the heat is evenly spread over the bottom of the pan, meaning no more annoying hot or cold spots, the ILVE induction elements also include booster (to minimize heat up times), timers and many safety you've come to expect from ILVE.
